

e-Cruise DSL

Make your car intelligent and avoid speeding tickets

*E-Cruise DSL helps you avoid the tickets,
drive more safely, and use less fuel.*

E-Cruise DSL is the first system to use the existing cameras in the vehicle for reading road signs and using the data to limit the speed of the vehicle. You won't miss any signs, and speeding tickets are a thing of the past.

E-Cruise DSL lets you limit the speed of the vehicle proactively according to the information seen by the camera on the road signs. There are many benefits, including avoidance of speeding tickets and better safety from never driving too fast. In addition, studies show that dynamic control of the speed of the vehicle reduces fuel consumption.

E-Cruise DSL is the first dynamic speed limiting device in the world. It was developed specifically for the Toyota Road Sign Assist (RSA) camera technology.

E-Cruise DSL details:

- Automatically limits the speed of the vehicle according to the information on road signs
- Works with cruise control systems
- ON/OFF button lets you choose when to use the system
- Fits all Toyota models equipped with a Road Sign Assist camera
- Inexpensive and quick installation by any authorized mechanic
- Optional permanent top speed limit
